FALL SEMESTER, YEAR (IInd, 2nd)

FALL SESSION (2021-22)

Example of Artificial Intelligence

- Today AI is a very popular topic, which is discussed a lot in the fields of technology and business.
- Many experts and industry experts believe that AI or machine learning is our future.
- But if we look around us, we will find that it is not our future but the present.
- With the development of technology, today we are connected with Artificial Intelligence in some way or the other and are also taking advantage of it.
- Yes, it is a fact that AI technology is in its first stage.

Example of Artificial Intelligence

- Recently, many companies have invested a lot on machine learning.
- Due to which many AI products and apps have become available to us.
- So let us now give you some such AI examples used today, so that you will be able to understand better
- what is Artificial Intelligence?

1. Siri

- You must have probably heard about Siri,
- it is the most popular virtual assistant offered by Apple.
- Although it is only available on iPhone and iPad.
- It's the best example of AI, just say 'Hey Siri' and it can send messages to you, find information on the Internet, make phone calls, open any application, even set a timer.
- And can help you in tasks like saving events in calendar.

2. Tesla

- Not only Smartphones but also Automobiles are moving towards Artificial Intelligence.
- If you are a car geek, you must be aware of Tesla.
- It is one of the best automobiles available till date.
- The Tesla car offers not only self-driving features but also productive capabilities and complete technological innovation.
- Similarly, many more self-driving cars are being built, which will become even smarter in the coming times.

3. Google Map

- By the way, Google uses AI in many areas.
- But AI technology has been used well in Google Maps.
- Along with AI mapping, the giant's technology scans the road information and gives us the correct route using algorithms to guide us to any point.
- Right now Google plans to further enhance the artificial intelligence in its Google Maps by improving its voice assistant and creating augmented reality maps in real time.

4. Nest

- Nest was one of the most famous and artificial intelligence startups
- And was bought by Google in 2014.
- Nest Learning Thermostat Saves energy based on your behavior and routine.
- It uses behavioral algorithms to do this.
- It is such an intelligent machine, that it can find out the useful temperature for you in just a week.
- If there is no one in the house, it automatically turns off to save energy.

5. Echo

- Echo was launched by Amazon.
- It's a revolutionary product that can answer your questions, read audiobooks for you, tell you traffic and weather conditions, provide local business information, and even provide sports scores. Can do.
- Even more major changes are being made to the Echo, due to which it is adding new features.
- Hopefully, the time to come will make the Echo even smarter.
